This short technical paper presents the first practical technology solution for traveling faster than the speed of light. Most of the hardware & technology necessary for the first tests have already been developed, although faster computer processors may be required for synchronization. Light-years of distance can be traversed by performing millions of "hops;" yet the entire distance traveled requires only a fraction of a second. Each reader must comprehend that our universe is blinking off and on, more than 1 trillion times every second.

For those unconvinced that our universe is blinking, please read "1024 Elementary Particles," which provides compelling mathematical evidence.
