Oncology Informatics: Using Health Information Technology to Improve Processes and Outcomes in Cancer Bradford W. Hesse, David Ahern, Ellen Beckjord

Oncology Informatics: Using Health Information Technology to Improve Processes and Outcomes in Cancer Care encapsulates National Cancer Institute-collected evidence into a format that is optimally useful for hospital planners, physicians, researcher, and informaticians alike as they collectively strive to accelerate progress against cancer using informatics tools.

This book is a formational guide for turning clinical systems into engines of discovery as well as a translational guide for moving evidence into practice. It meets recommendations from the National Academies of Science to "reorient the research portfolio" toward providing greater "cognitive support for physicians, patients, and their caregivers" to "improve patient outcomes." Data from systems studies have suggested that oncology and primary care systems are prone to errors of omission, which can lead to fatal consequences downstream. By infusing the best science across disciplines, this book creates new environments of "Smart and Connected Health."

Oncology Informatics is also a policy guide in an era of extensive reform in healthcare settings, including new incentives for healthcare providers to demonstrate "meaningful use" of these technologies to improve system safety, engage patients, ensure continuity of care, enable population health, and protect privacy. *Oncology Informatics* acknowledges this extraordinary turn of events and offers practical guidance for meeting meaningful use requirements in the service of improved cancer care.

Anyone who wishes to take full advantage of the health information revolution in oncology to accelerate successes against cancer will find the information in this book valuable.

- Presents a pragmatic perspective for practitioners and allied health care professionals on how to implement Health I.T. solutions in a way that will minimize disruption while optimizing practice goals
- Proposes evidence-based guidelines for designers on how to create system interfaces that are easy to use, efficacious, and timesaving
- Offers insight for researchers into the ways in which informatics tools in oncology can be utilized to shorten the distance between discovery and practice

From reader reviews:

Cynthia Medina:

Book is written, printed, or created for everything. You can realize everything you want by a e-book. Book has a different type. As we know that book is important matter to bring us around the world. Alongside that you can your reading skill was fluently. A e-book Oncology Informatics: Using Health Information Technology to Improve Processes and Outcomes in Cancer will make you to be smarter. You can feel a lot more confidence if you can know about almost everything. But some of you think this open or reading a new book make you bored. It isn't make you fun. Why they may be thought like that? Have you trying to find best book or acceptable book with you?

Carlos Lauzon:

Now a day individuals who Living in the era exactly where everything reachable by match the internet and the resources in it can be true or not call for people to be aware of each info they get. How individuals to be smart in having any information nowadays? Of course the solution is reading a book. Reading through a book can help individuals out of this uncertainty Information specifically this Oncology Informatics: Using Health Information Technology to Improve Processes and Outcomes in Cancer book since this book offers you rich details and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it you know.

Michelle Favors:

Would you one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Make an effort to pick one book that you find out the inside because don't judge book by its deal with may doesn't work the following is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside look likes. Maybe you answer can be Oncology Informatics: Using Health Information Technology to Improve Processes and Outcomes in Cancer why because the great cover that make you consider with regards to the content will not disappoint anyone. The inside or content will be fantastic as the outside or maybe cover. Your reading sixth sense will directly show you to pick up this book.

William Lebel:

Are you kind of occupied person, only have 10 or maybe 15 minute in your day to upgrading your mind expertise or thinking skill also analytical thinking? Then you are experiencing problem with the book compared to can satisfy your short space of time to read it because pretty much everything time you only find reserve that need more time to be read. Oncology Informatics: Using Health Information Technology to Improve Processes and Outcomes in Cancer can be your answer as it can be read by an individual who have those short spare time problems.
