Critical Thinking, Science, and Pseudoscience: Why We Can't Trust Our Brains Caleb W. Lack PhD, Jacques Rousseau MA

This unique text for undergraduate courses teaches students to apply critical thinking skills across all academic disciplines by examining popular pseudoscientific claims through a multidisciplinary lens. Rather than merely focusing on critical thinking, the text incorporates the perspectives of psychology, biology, physics, medicine, and other disciplines to reinforce different categories of rational explanation. Accessible and engaging, it describes what critical thinking is, why it is important, and how to learn and apply skills that promote it. The text also examines why critical thinking can be difficult to engage in and explores the psychological and social reasons why people are drawn to and find credence in extraordinary claims.

From alien abductions and psychic phenomena to strange creatures and unsupported alternative medical treatments, the text uses examples from a wide range of pseudoscientific fields and brings evidence from diverse disciplines to critically examine erroneous claims. Particularly timely is the text's examination of how, using the narrative of today's "culture wars," religion and culture impact science. The authors focus on how the human brain, rife with natural biases, does not process information in a rational fashion, and the social factors that prevent individuals from gaining an unbiased, critical perspective on information. Authored by a psychologist and a philosopher who have extensive experience teaching and writing on critical thinking and skeptical inquiry, this work will help students to strengthen their skills in reasoning and debate, become intelligent consumers of research, and make well-informed choices as citizens.
