## **Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology)**

Membrane Receptors, Channels and Transporters in Pulmonary Circulation is a proceeding of the 2008 Grover Conference (Lost Valley Ranch and Conference Center, Sedalia, Colorado; September 3-7, 2008), which provided a forum for experts in the fields of those receptors, channels and transporters that have been identified as playing key roles in the physiology and pathophysiology of the pulmonary circulation. The book rigorously addresses: i) recent advances in our knowledge of receptors, channels and transporters and their role in regulation of pulmonary vascular function; ii) how modulation of expression and function of receptors, channels and transporters and their interrelationships contribute to the pathogenesis of pulmonary vascular disease; and iii) the therapeutic opportunities that may be revealed by enhancing our understanding of this area. The overall goal was to explore the mechanisms by which specific receptors, channels and transporters contribute to pulmonary vascular function in both health and disease, and how this knowledge may lead to novel interventions in lung dysplasia, pulmonary edema, lung injury, and pulmonary and systemic hypertension to reduce and prevent death from lung disease. Membrane Receptors, Channels and Transporters in Pulmonary Circulation is divided into six parts. Part I (Ion Channels in the Pulmonary Vasculature: Basics and New Findings) is designated for basic knowledge and recent findings in the research field of ion channels in pulmonary circulation. There are five chapters in Part I discussing the function, expression, distribution and regulation of various ion channels present in pulmonary vascular smooth muscle cells and how these channels are integrated to regulate intracellular  $Ca^{2+}$  and cell functions. Part II (TRP Channels in the Pulmonary Vasculature: Basics and New Findings) is composed of five chapters that are exclusively designed to discuss the role of a recently identified family of cation channels, transient receptor potential (TRP) channels, in the regulation of pulmonary vascular tone and arterial structure. Part III (Pathogenic Role of Ion Channels in Pulmonary Vascular Disease) includes four chapters that discuss how abnormal function and expression of various ion channels contribute to changes in cell functions and the development of pulmonary hypertension. Part IV (Receptors and Signaling Cascades in Pulmonary Arterial Hypertension) consists of five chapters devoted to the role of bone morphogenetic protein receptors, Notch receptors, serotonin receptors, Rho kinase and vascular endothelial growth factor receptors in the development of pulmonary arterial hypertension. Part V (Receptors and Transporters: Role in Cell Function and Hypoxic Pulmonary Vasoconstriction) includes four chapters designed to illustrate the potential mechanisms involved in oxygen sensing and hypoxia-induced pulmonary vasoconstriction and hypertension. Part VI (Targeting Ion Channels and Membrane Receptors in Developing Novel Therapeutic Approaches for Pulmonary Vascular Disease) consists five chapters which discuss the translational research involving on membrane receptors, channels and transporters, including their potential as novel drug targets. We hope that Membrane Receptors, Channels and Transporters in Pulmonary Circulation will allow readers to foster new concepts and new collaborations and cooperations among investigators so as to further understand the role of receptors, channels and transporters in lung pathophysiology. The ultimate goal is to identify new mechanisms of disease, as well as new therapeutic targets for pulmonary vascular diseases. An additional outcome should be enhanced understanding of the role of these entities in systemic vascular pathophysiology, since the conference will include researchers and clinicians with interests in both pulmonary and systemic circulations.

### **From reader reviews:**

#### **James Bergeron:**

In other case, little folks like to read book Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology). You can choose the best book if you'd prefer reading a book. Providing we know about how is important some sort of book Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology). You can add expertise and of course you can around the world by the book. Absolutely right, since from book you can recognize everything! From your country until finally foreign or abroad you will end up known. About simple thing until wonderful thing you could know that. In this era, we could open a book or searching by internet device. It is called e-book. You may use it when you feel bored to go to the library. Let's study.

#### **Juan Turgeon:**

This book untitled Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology) to be one of several books which best seller in this year, that is because when you read this e-book you can get a lot of benefit on it. You will easily to buy this kind of book in the book retail store or you can order it by using online. The publisher on this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Smart phone. So there is no reason to your account to past this book from your list.

#### **Charlotte Bernstein:**

The book untitled Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology) contain a lot of information on the idea. The writer explains your ex idea with easy means. The language is very straightforward all the people, so do certainly not worry, you can easy to read the idea. The book was authored by famous author. The author provides you in the new age of literary works. You can read this book because you can read more your smart phone, or model, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can available their official web-site as well as order it. Have a nice read.

#### **Edward Grimes:**

Beside that Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology) in your phone, it could give you a way to get more close to the new knowledge or information. The information and the knowledge you can got here is fresh from the oven so don't become worry if you feel like an older people live in narrow town. It is good thing to have Membrane Receptors, Channels and Transporters in Pulmonary Circulation (Advances in Experimental Medicine and Biology) because this book offers to you personally readable information. Do you often have book but you rarely get what it's interesting features of. Oh come on, that would not happen if you have this within your

hand. The Enjoyable blend here cannot be questionable, including treasuring beautiful island. Use you still want to miss this? Find this book and also read it from at this point!
