Culturing Nerve Cells (Cellular and Molecular Neuroscience Series)

Culturing Nerve Cells (Cellular and Molecular Neuroscience Series)

This do-it-yourself manual describes complete recipes and protocols for biological scientists, particularly neurobiologists, who want to learn how to grow neurons in culture and how to do it well. Moreover, it provides an understanding of the principles behind the protocols. Offering a more coherent overview of techniques than the usual compendium of methods sections, *Culturing Nerve Cells* also takes into account the numerous details that can make the difference between success and failure by asking experienced culturists to share their technical expertise.

Introductory chapters present a brief course on the nuts and bolts of culturing all types of nerve cells—including the kinds of cultures available and which might be the best for a specific application—methods for cell dissociation, culture media, and substrates, and a description of the techniques needed to characterize and study cultures. More than 20 experts then describe the culture systems that they have developed, including the details of each protocol as well as all of the tricks, lore, and troubleshooting techniques that never appear in the scientific literature.

Contents: A User's Guide. Getting Started. General Principles. Types of Nerve Cell Cultures, Their Advantages and Limitations. Primary Dissociated Cell Cultures of Neuronal Tissue. Characterizing and Studying Neuronal Cultures. Culture of Specific Cell Types. Isolated Chick Neurons for the Study of Axonal Growth. Culturing Spinal Neurons and Muscle Cells from *Xenopus* Embryos. Culturing the Large Neurons of *Aplysia*. Tissue Culture of Mammalian Autonomic Neurons. Methodologies for the Culture and Experimental Use of the PC12 Rat Pheochromocytoma Cell Line. Cell Culture of Neocortex and Basal Forebrain from Postnatal Rats. Rat Hippocampal Neurons in Low-Density Culture. Cerebellar Cells in Culture. Astroglia in Culture. Tissue Culture Methods for the Study of Myelination. Organotypic Slice Cultures of Neural Tissue.

From reader reviews:

Sheila Lefevre:

This Culturing Nerve Cells (Cellular and Molecular Neuroscience Series) book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you will get by reading this book will be information inside this guide incredible fresh, you will get facts which is getting deeper a person read a lot of information you will get. This particular Culturing Nerve Cells (Cellular and Molecular Neuroscience Series) without we understand teach the one who looking at it become critical in pondering and analyzing. Don't be worry Culturing Nerve Cells (Cellular and Molecular Neuroscience Series) can bring when you are and not make your bag space or bookshelves' turn into full because you can have it with your lovely laptop even cell phone. This Culturing Nerve Cells (Cellular and Molecular Neuroscience Series) having very good arrangement in word along with layout, so you will not experience uninterested in reading.

Joyce Murphy:

Hey guys, do you would like to finds a new book to read? May be the book with the concept Culturing Nerve Cells (Cellular and Molecular Neuroscience Series) suitable to you? The book was written by well known writer in this era. The particular book untitled Culturing Nerve Cells (Cellular and Molecular Neuroscience Series)is one of several books in which everyone read now. This book was inspired many men and women in the world. When you read this e-book you will enter the new shape that you ever know just before. The author explained their concept in the simple way, so all of people can easily to comprehend the core of this reserve. This book will give you a wide range of information about this world now. To help you see the represented of the world on this book.

Joseph Kidwell:

Reading a e-book can be one of a lot of action that everyone in the world adores. Do you like reading book and so. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new info. When you read a e-book you will get new information because book is one of numerous ways to share the information as well as their idea. Second, reading a book will make anyone more imaginative. When you examining a book especially hype book the author will bring you to imagine the story how the characters do it anything. Third, you can share your knowledge to others. When you read this Culturing Nerve Cells (Cellular and Molecular Neuroscience Series), it is possible to tells your family, friends in addition to soon about yours guide. Your knowledge can inspire others, make them reading a publication.

Ruth Westlund:

In this era globalization it is important to someone to acquire information. The information will make professionals understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of referrals to get information example: internet, classifieds, book, and soon. You can see that now, a lot of publisher that print many kinds of book. Typically the book that recommended to you is Culturing Nerve Cells (Cellular and Molecular Neuroscience Series) this book

consist a lot of the information in the condition of this world now. This specific book was represented how does the world has grown up. The vocabulary styles that writer use to explain it is easy to understand. The particular writer made some research when he makes this book. This is why this book appropriate all of you.
