Lattice Boltzmann Methods for Shallow Water Flows Jian Guo Zhou

The lattice Boltzmann method (LBM) is a modern numerical technique, very efficient, flexible to simulate different flows within complex/varying geometries. It is evolved from the lattice gas automata (LGA) in order to overcome the difficulties with the LGA. The core equation in the LBM turns out to be a special discrete form of the continuum Boltzmann equation, leading it to be self-explanatory in statistical physics. The method describes the microscopic picture of particles movement in an extremely simplified way, and on the macroscopic level it gives a correct average description of a fluid. The averaged particle velocities behave in time and space just as the flow velocities in a physical fluid, showing a direct link between discrete microscopic and continuum macroscopic phenomena. In contrast to the traditional computational fluid dynamics (CFD) based on a direct solution of flow equations, the lattice Boltzmann method provides an indirect way for solution of the flow equations. The method is characterized by simple calculation, parallel process and easy implementation of boundary conditions. It is these features that make the lattice Boltzmann method a very promising computational method in different areas. In recent years, it receives extensive attentions and becomes a very potential research area in computational fluid dynamics. However, most published books are limited to the lattice Boltzmann methods for the Navier-Stokes equations. On the other hand, shallow water flows exist in many practical situations such as tidal flows, waves, open channel flows and dam-break flows.

From reader reviews:

Anna Harlow:

The book Lattice Boltzmann Methods for Shallow Water Flows can give more knowledge and information about everything you want. So just why must we leave the best thing like a book Lattice Boltzmann Methods for Shallow Water Flows? A number of you have a different opinion about publication. But one aim that will book can give many information for us. It is absolutely correct. Right now, try to closer together with your book. Knowledge or information that you take for that, you may give for each other; you are able to share all of these. Book Lattice Boltzmann Methods for Shallow Water Flows has simple shape but you know: it has great and big function for you. You can look the enormous world by open up and read a guide. So it is very wonderful.

Jacqueline Lewis:

Book is to be different for every grade. Book for children right up until adult are different content. We all know that that book is very important for us. The book Lattice Boltzmann Methods for Shallow Water Flows has been making you to know about other expertise and of course you can take more information. It is quite advantages for you. The guide Lattice Boltzmann Methods for Shallow Water Flows is not only giving you considerably more new information but also to be your friend when you sense bored. You can spend your own personal spend time to read your publication. Try to make relationship with all the book Lattice Boltzmann Methods for Shallow Water Flows. You never sense lose out for everything should you read some books.

Mark Nixon:

This Lattice Boltzmann Methods for Shallow Water Flows are generally reliable for you who want to be considered a successful person, why. The reason of this Lattice Boltzmann Methods for Shallow Water Flows can be one of the great books you must have is usually giving you more than just simple examining food but feed anyone with information that might be will shock your previous knowledge. This book is definitely handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed versions. Beside that this Lattice Boltzmann Methods for Shallow Water Flows giving you an enormous of experience including rich vocabulary, giving you test of critical thinking that we understand it useful in your day action. So , let's have it and enjoy reading.

Thomas Crittenden:

A lot of people always spent all their free time to vacation or perhaps go to the outside with them family or their friend. Do you know? Many a lot of people spent that they free time just watching TV, or perhaps playing video games all day long. If you want to try to find a new activity that is look different you can read some sort of book. It is really fun to suit your needs. If you enjoy the book that you read you can spent the whole day to reading a e-book. The book Lattice Boltzmann Methods for Shallow Water Flows it is extremely good to read. There are a lot of folks that recommended this book. They were enjoying reading

this book. When you did not have enough space to deliver this book you can buy the e-book. You can more very easily to read this book out of your smart phone. The price is not too expensive but this book has high quality.
